DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles E. Baxley on September 28, 2004.

Attorney agreed the cancel the claim 2.

Claim 1(Amending) A lens assembly comprising: A first group of lens having a negative power, a second group of lens having a positive power, and a third group of lens having a positive power arranged in sequence from an object side, a gap between the first group of lens and the second group of lens being reduced and a gap between the second group of lens and the third group of lens being widened when Wide mode changed to Tele mode, the first group of lens having a negative meniscus lens with a convex surface facing the object side and a positive meniscus lens with a convex surface facing the object side , the second group of lens having positive lenses glued-lenses and a negative meniscus lens with a convex surface facing the object side , the third group of lens having a bi-convex lens; and wherein the focal length of the

Art Unit: 2873

negative meniscus lens is f_{2n} and the focal length of whole second group of lens is f_2 , the criteria is $1.0 < |f_{2n} / f_2| < 2.2$.

Allowable Subject Matter

2. Claim 1, 4, and 5 are allowed.
3. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in a combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim 1, for example which include a lens assembly having the second lens group having positive glued – lenses and a negative meniscus lens with a convex surface facing the object side and wherein the focal length of the negative meniscus lens is f_{2n} and the focal length of whole second group of lens is f_2 and the satisfy the following condition: $1.0 < |f_{2n} / f_2| < 2.2$.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammed Hasan whose telephone number is (571) 272-2331. The examiner can normally be reached on M-TH, 7:00 AM to 5:30 PM.
